Objective

Fullstack Developer with a focus on web frontend, building complex, product-driven applications using React, Vue, and Node.js. Experienced working across cross-functional teams to deliver real business value, from automating manual workflows to shipping AI-powered features in production.

Introduction Letter

I am a Fullstack Developer with stronger depth in frontend engineering, especially in React, Next.js, and Vue ecosystems. My work is centered on building applications that solve operational problems in practice, whether that means replacing manual workflows, improving platform consistency through reusable components, or introducing new product capabilities such as AI-powered experiences. I care about making thoughtful technical decisions: using Next.js in a way that actually benefits rendering and performance, relying on TypeScript to improve clarity and prevent avoidable errors, and favoring maintainable UI approaches such as shared design systems and Tailwind-based styling. I work well in collaborative product teams, close to designers and other developers, and I value delivering solutions that are both technically solid and useful for the business.

Professional Experience

Web Developer – Elevential

September 2023 - Present — Teams of 4-10 (Devs, PO, Tech Lead, QA)

GarantiaBr - B2B Backoffice Platform

- Developed a Next.js backoffice to manage which companies and users can access GarantiaBr's product suite, including onboarding flows for company departments and permission management.
- Refactored a Django form module to support draft saving and file uploads, improving the robustness of the submission workflow.
- Built reusable UI components with shadcn/ui, establishing a design system shared across multiple projects.

Auren - Energy Commercialization Platform

- Replaced a spreadsheet-and-email-based process with a B2B partner portal serving 30+ partners, automating most of the energy purchasing flow (final validation still requires human approval).
- Built the frontend from scratch using Vue + PrimeVue, integrating with Salesforce to display quotation statuses and tracking data in real time.
- Developed marketing campaign features (anniversary, Black Friday) within the platform.

Solucx - User Feedback and Analytics Dashboard

- Implemented an AI-powered chat in production, featuring conversation history, prompt favoriting, and integration with an AI backend.
- Added two configurable dashboard item types: a prompt-based item and a fully custom item - users provided a JSON query and chart config, rendered via Highcharts, with a CodeMirror editor and JSONata for data transformation.

- Stack: Vue + Element Plus, tested with Vitest.

Dataside - Power BI Asset Management

- Built a React application for managing user permissions and folder structures over Power BI assets.

PromoFarma - ETL and Data Platform

- Developed Python ETL pipelines for sell-in, sell-out, stock, product, seller, and store data ingestion from third-party REST APIs to Google Cloud Storage in Parquet format.
- Built orchestrated data pipelines with Airflow, Dataproc, PySpark, Delta Lake, and SQL across raw, trusted, and refined layers, including partitioning, schema normalization, deduplication, and merge-based processing.
- Implemented BigQuery load automation and data pipeline reliability features, including cursor-based pagination, retry logic, configurable reprocessing windows, XML fiscal document enrichment, and local debugging support.

Congresso - Scientific Congress Management (Internal)

- Developed an event calendar feature allowing organizers to create and visualize activities by day, room, and time slot.
- Platform handled submission, review, and approval flows across three user roles: submitters, reviewers, and editors.

Fullstack Developer Intern – TokenLab

October 2021 - September 2023 — Teams of 4-10

- Frontend: Angular (product management app), Strapi CMS integration.
- Backend: AWS services.
- Real-time: Encrypted chat using GraphQL subscriptions.
- Mobile: Flutter.
- Developed strong habits around code versioning, agile planning, and cross-team collaboration.

Web Developer – Freelance

July 2021 - October 2021

- Built a CRUD web application to replace an Excel-based property rental management workflow for a private client. Frontend in Next.js (React) with Semantic UI; backend on Back4app. Deployed on Vercel.

Education

Bachelor of Computer Science – Universidade do Estado do Rio de Janeiro (UERJ)
2024

Certifications

AWS Certified Cloud Practitioner – credly.com/badges/133ee89f-3ddb-4972-ab47-3abb559f8ef2

Skills

Languages: JavaScript, TypeScript, Python, SQL, Dart, HTML, CSS, Shell Script

Frontend: React, Next.js, Vue, Angular, Tailwind, Shadcn/ui, Element Plus, PrimeVue

Backend: Node.js, Nest.js, Express, Django, TypeORM

Data Engineering: Airflow, PySpark, Delta Lake, BigQuery, Dataproc, ETL, Data Pipelines

Mobile: Flutter

Tools and Infra: Docker, AWS, GCP, GitHub, Bitbucket, GraphQL, REST, Linux

Testing: Jest, Vitest

Languages

Portuguese – Native

English – B2 (EF SET Certificate – cert.efset.org/pt/rYd4yM)
